

HOW TO FIND AN (M)SDS

In order to locate a material safety data sheet on a chemical, you **MUST** know the name of the product. If you have the container in front of you, identify the name that the product is sold under, not necessarily the type of product or manufacturer. For example: Germ-X hand sanitizer is listed under Germ-X .

Steps for obtaining the (M)SDS:

1. Select the school (or building) where the product is found
2. Select the location within the building where the product is found (i.e clinic, kitchen, etc.)
3. Select the product name and double click. The material safety data sheet will open and it display information such as the ingredients, first aid measures, proper disposal methods, and manufacturer contact information.

If you are having difficulty locating an (M)SDS, check the label again for another name that the product may be listed under. If the (M)SDS cannot be found, call the manufacturer and request the (M)SDS and let Del Dautrich know the information is missing.

Please remember that before any chemicals are brought into the school system, they must be approved by Del Dautrich, Safety Manager for Gloucester County Public Schools. His contact information is:
(804) 693-7549

Thank you for your assistance.
